Dresden, 2025/03/18. Ebara Precision Machinery Europe GmbH (short: EPME), a leader in the development and production of vacuum pumps, gas abatement systems and CMP systems, announces the relocation of its headquarters to Dresden, Europe's most important location for the semiconductor industry. This move underlines the company's commitment to further expand and emphasise its presence in one of the world's most innovative and fastest growing markets.

The headquarters, strategically located in the centre of one of Europe's leading semiconductor hubs, will enable EPME to work even more closely with partners, customers and scientific institutions. This not only strengthens the company's competitiveness but also promotes access to highly qualified specialists and the latest technology.

'The decision to move our headquarters to this important location is a clear demonstration of our long-term vision and our endeavour to remain a leader in the semiconductor industry. This move will enable us to respond even better to the needs of our customers and further expand our portfolio of innovative solutions,' says Jörg Bruckamp, Managing Director of EPME. He continues: 'The semiconductor industry in Europe has grown enormously in importance in recent years, and we are proud to be actively involved in shaping this change.'

About EBARA Precision Machinery Europe

The EPME portfolio includes dry and turbomolecular vacuum pumps as well as modern gas abatement systems for the chemical industry, for example. EPME also sells state-of-the-art CMP tools, wafer bevel polishing and substrate coating systems for chip manufacturing. In 2021, EBARA opened its second modern overhaul centre for vacuum pumps in Dresden. EPME has been operating a vacuum pump overhaul centre in Livingston (UK) since 1993. EPME employs about 240 people in Europe and Israel.
